

USHST Helicopter Accident Study

- **2016 U.S. Helicopter Safety Team (USHST) Helicopter Accident Study**
Review of 185 NTSB helicopter accident reports between 1965 and 2013 which occurred while operating at or in proximity to a designated helicopter landing area.
- **FINDINGS:**
 1. Validated FAA's 1990's findings in that the majority of heliport accidents (>90%) occurred at heliports that did not adhere to the FAA's heliport design advisory circular guidance.
 2. No person from the general public has ever been injured or killed from an accident occurring at a ground based private-use heliport.
